**PARTNER<sup>®</sup> Plus**  
Communications System  
Release 4.1

Installation

518-455-227  
Comcode 107879199  
Issue 2  
August 1996

### **Notice**

Every effort was made to ensure that the information in this book was complete and accurate at the time of printing. However, information is subject to change.

### **Federal Communications Commission (FCC) Interference Notice**

This equipment has been tested and found to comply with the limits of a Class A digital device, pursuant to Part 15 of FCC rules. For additional FCC information, see Appendix C of the *PARTNER Plus Communications System Programming and Use* guide.

### **Canadian Emissions Requirements**

This digital apparatus does not exceed the Class A limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Industry Canada (IC). For additional IC information, see Appendix C of the *PARTNER Plus Communications System Programming and Use* guide.

Le present appareil numerique n'emet pas de bruits radioelectriques depassant les limites applicable aux appareils numeriques de la classe A prescrites dans le Reglement sur le brouillage radioelectrique edicte par le ministere des Industrie Canada. Vous trouverez des renseignements complémitaires à la annexe C de *PARTNER Plus Communications System Programming and Use* manuel.

### **Security**

Toll fraud, the unauthorized use of your telecommunications system by an unauthorized party (for example, persons other than your company's employees, agents, subcontractors, or persons working on your company's behalf) can result in substantial additional charges for your telecommunications services. You are responsible for the security of your system. There may be a risk of toll fraud associated with your telecommunications system. You are responsible for programming and configuring your equipment to prevent unauthorized use. Your system manager should read all documents provided with this product to fully understand the features that can introduce the risk of toll fraud and the steps that can be taken to reduce that risk. Lucent Technologies does not warrant that this product is immune from or will prevent unauthorized use of common-carrier telecommunication services or facilities accessed through or connected to it. Lucent Technologies will not be responsible for any charges that result from such unauthorized use.

### **Trademarks**

PARTNER MAIL, PARTNER MAIL VS, Magic on Hold, MLS-34D, MLS-18D, MLS-12D, MLS-12, MLS-6, PARTNER, and SYSTIMAX are registered trademarks of Lucent Technologies.

### **Warranty**

Lucent Technologies provides a limited warranty to this product. See Appendix B of the *PARTNER Plus Communications System Programming and Use* guide.

### **Ordering Information**

The order number for this book is 518-455-227. To order additional books, call 1 800 457-1235 in the continental U.S. or 1 317 361-5353 outside the continental U.S. For information about ordering other system reference materials, replacement parts, accessories, and other compatible equipment, see "Product Ordering Information" in Appendix B of the *PARTNER Plus Communications System Programming and Use* guide.

### **Support Telephone Number**

In the continental U.S., Lucent Technologies provides a toll-free hotline 24 hours a day. Call the hotline at **1 800 628-2888** if you need assistance when installing your system.

Outside the continental U.S., contact your Lucent Technologies Representative or local Authorized Dealer.

## **Important Safety Instructions**

---

The following list provides basic safety precautions that should always be followed when using your telephone equipment:

1. Read and understand all instructions.
2. Follow all warnings and instructions marked on the product.
3. Unplug all telephone connections before cleaning. **DO NOT** use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.
4. This product should be serviced by (or taken to) a qualified repair center when service or repair work is required.
5. **DO NOT** use this product near water, for example, in a wet basement location.
6. **DO NOT** place this product on an unstable cart, stand, or table.
7. Never push objects of any kind into slots or openings as they may touch dangerous voltage points or short out parts that could result in a risk of fire or electric shock. Never spill liquid of any kind on the product.
8. Avoid using the telephone during an electrical storm. There may be a remote risk of electric shock from lightning.
9. **DO NOT** use the telephone to report a gas leak in the vicinity of the leak.
10. The product is provided with a three-wire grounding type plug. This is a safety feature. **DO NOT** defeat the safety purpose of the grounding type plug. **DO NOT** staple or otherwise attach the power supply cord to building surfaces.

**CAUTION:**

***DO NOT block or cover the ventilation slots and openings. They prevent the product from overheating. DO NOT place the product in a separate enclosure unless proper ventilation is provided.***

## **Additional Safety Instructions for Installation Personnel**

---

1. **DO NOT** install telephone wiring during a lightning storm.
2. **DO NOT** install telephone jacks in a wet location unless the jack is specifically designed for wet locations.
3. Never touch uninsulated telephone wires or terminals, unless the telephone line has been disconnected at the network interface.
4. Use caution when installing or modifying telephone lines.
5. The control unit must be securely wall mounted.

**CAUTION:**

***If any wiring from the extension jacks leaves the building premises, you must install Lucent Technologies IROB protectors (see "Requirements for Out-of-Building Extensions" on page 24).***

**CAUTION:**

***Use only Lucent Technologies-manufactured PARTNER modules in the PARTNER Plus Communications System.***

**CAUTION:**

***Environmental and electrical conditions must meet the specifications as listed on page 23.***

**SAVE THESE INSTRUCTIONS**

---

# Installation

---

## Overview

---

This guide explains how to install the PARTNER® Plus Communications System. It begins with an example system setup, then shows the components you need to install the system and gives general guidelines to consider before installation. Next, it provides step-by-step instructions for connecting and testing the components for initial installation and upgrades. Finally, it lists important system specifications. Make sure that your installation meets all electrical and environmental requirements.

If your company already has modular jacks for all outside lines and extensions, you may be able to use the existing wiring to install the system hardware and connect telephones to the system yourself. To have a Lucent Technologies service technician install and customize your system or change existing wiring, call 1 800 247-7000 (in the continental U.S. only) or call your Lucent Technologies Representative or local Authorized Dealer.

After installation, refer to the *PARTNER Plus Communications System Programming and Use* guide for programming instructions.

# An Example System Setup

The next page shows a control unit with two 206 modules and two 400 modules, giving the system a capacity of 12 outside lines and 12 extensions. Although your system may differ, this example will give you an idea of the types of equipment you can connect to it. In the example, system phones and industry-standard devices are connected to nine extensions. The circled numbers in the figure refer to the following list, which gives a brief description of the system's components.

## Control Unit

The control unit consists of these components:

- ① **Backplane.** The backplane channels power to the system and connects the system modules.
- ②A **206 Modules.** Each 206 module has jacks for two lines and six extensions.
- ②B **400 Modules.** Each 400 module provides four line jacks but no extensions. *Notice that the 400 modules are installed to the right of the 206 modules.*
- ③ **Processor Module.** The processor module contains the software that provides the system's features. It also has PAGE, SMDR, and MUSIC ON HOLD jacks.
- ④ **PAGE Jack.** A loudspeaker paging system plugs directly into this modular jack. The system is compatible with any Lucent Technologies paging system, including the Lucent Technologies PagePac6 shown here.
- ⑤ **SMDR Jack.** A call reporting (or SMDR—Station Message Detail Recording) device connects directly to this jack. Lucent Technologies' Call Accounting Terminal serial printer and box are shown here.
- ⑥ **MUSIC ON HOLD Jack.** Lucent Technologies' Magic on Hold® is connected to this jack to provide customized music and messages for callers on hold. Other types of audio equipment (including a CD player, cassette player, or stereo receiver) can be connected using an audio cord with an RCA phono plug (not supplied).  

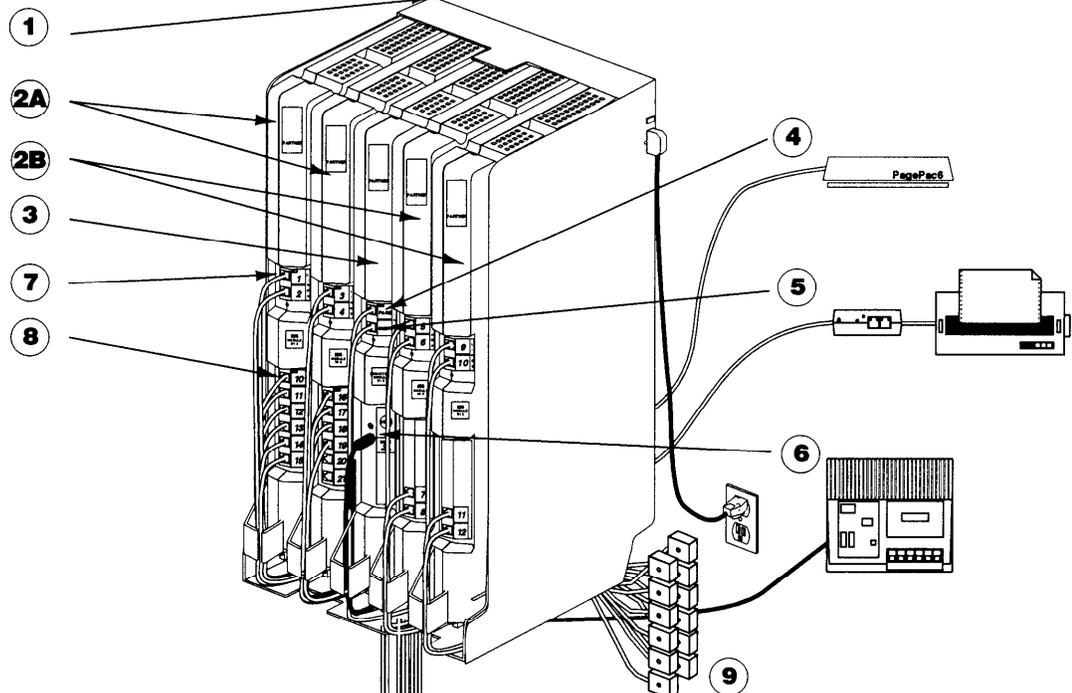

If you use equipment that rebroadcasts music or other copyrighted materials, you may be required to obtain a license from a third party such as ASCAP or BMI. For more information, see "Music-on-Hold Audio Source" later in this guide.
- ⑦ **Line Jacks.** The top two jacks on each 206 module, and all four jacks on each 400 module, connect to outside telephone lines.
- ⑧ **Extension Jacks.** The bottom six jacks on each 206 module connect inside wiring for telephones and other telecommunications equipment.
- ⑨ **Network Interface Jacks.** These jacks provide access to telephone lines from the local telephone company. Each outside line is connected to the system by plugging one end of the line cord into one of these jacks, and the other end into a line jack on a 206 or 400 module.

## Extensions

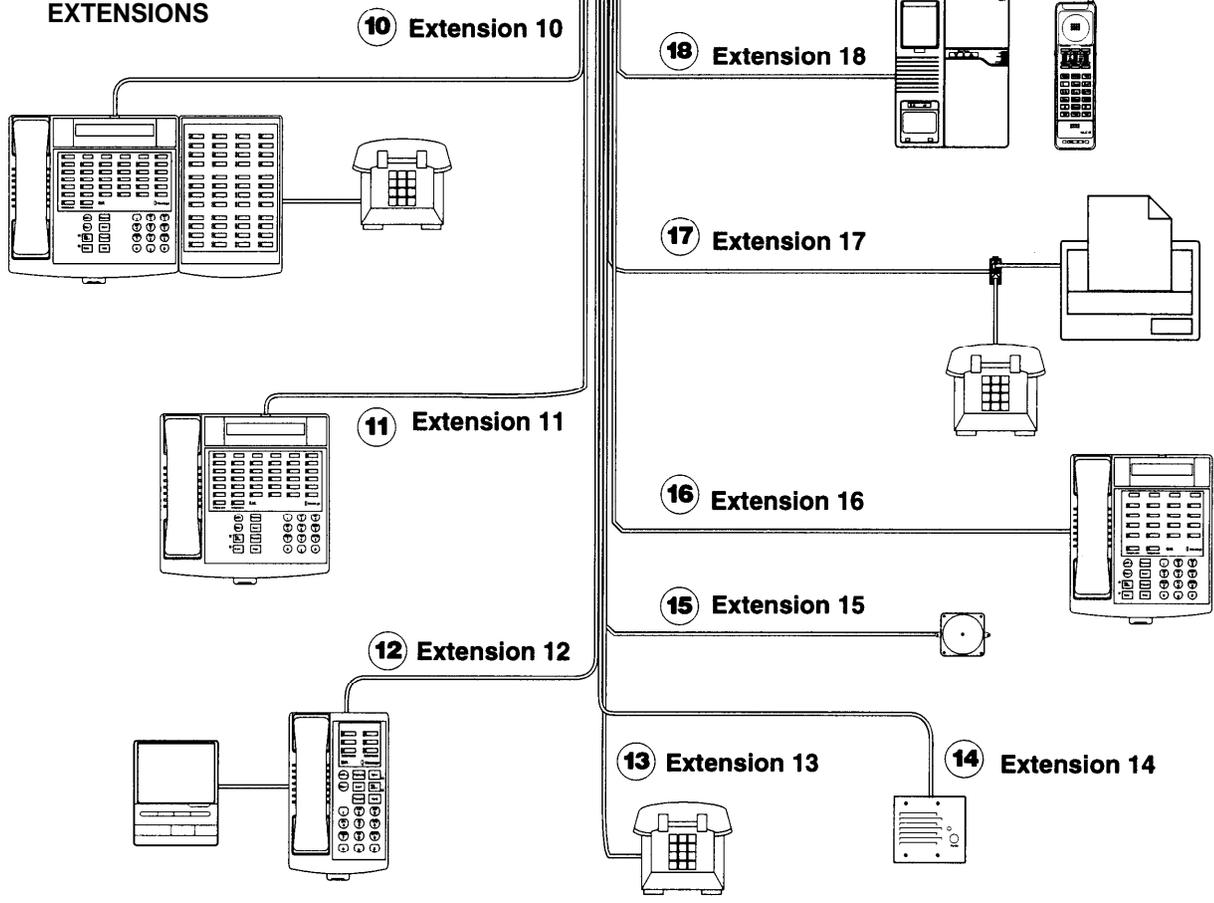

Various devices—including system phones and industry-standard devices—can be connected to the modular wall jacks. The modular wall jacks connect to the extension jacks in the control unit by way of the building's inside wiring.

- ⑩ **Extension 10:** These devices are connected:
  - **PARTNER-34D® Display Phone.** Typically, the receptionist at extension 10 has a PARTNER-34D display phone like the one shown here. The display shows the time, dialed numbers, the duration of call and programming messages.  
A display phone is required for system programming at extension 10 or 11, or both. You can use an 18-button display phone only if there are no 34-button phones in the system.
  - **PARTNER-CA48 Call Assistant Intercom Autodialer.** An Intercom Autodialer is connected the phone to dial extensions and transfer calls to them with one touch and to see which extensions are busy.
  - **Standard Touch-Tone Phone.** During a power failure, the PARTNER-34D phone on extension 10 will not work, but the receptionist can use the standard phone to place and receive calls on line 1.
- ⑪ **Extension 11: PARTNER-34D Display Phone.** Another PARTNER-34D is connected to programming extension 11. You can program the system from this extension while the receptionist at extension 10 is free to handle calls.
- ⑫ **Extension 12: PARTNER-6 Phone and Answering Machine.** A PARTNER-6 phone and an answering machine are connected to this extension.
- ⑬ **Extension 13: Standard Phone.** A standard phone (such as you might have in your home) is connected directly to the extension jack.
- ⑭ **Extension 14: Doorphone.** A doorphone is installed at the building entrance. When someone at the entrance presses the button on the doorphone, the designated extensions in the office signal automatically. (Any number of extensions can be designated as doorphone alert extensions.)
- ⑮ **Extension 15: Bell.** A loud bell is connected directly to this extension jack. Any line programmed to ring on extension 15 activates the loud bell—to alert users of an incoming call in a large area, such as a warehouse.
- ⑯ **Extension 16: PARTNER-18D Display Phone.** This phone has a display like the PARTNER-34D phone.
- ⑰ **Extension 17: Fax Machine and Standard Phone.** A fax machine and standard phone share this extension. This lets you have the use of another phone when the fax machine is idle. (You can use a system phone at another extension to monitor fax machine activity—see "Fax Management Feature" under "Using Fax Machines" in Chapter 4 of the *PARTNER Plus Communications System Programming and Use* guide.)
- ⑱ **Extension 18: MDC 9000 Cordless Phone.** This cordless phone works like the corded PARTNER-6 phone.

# CONTROL UNIT

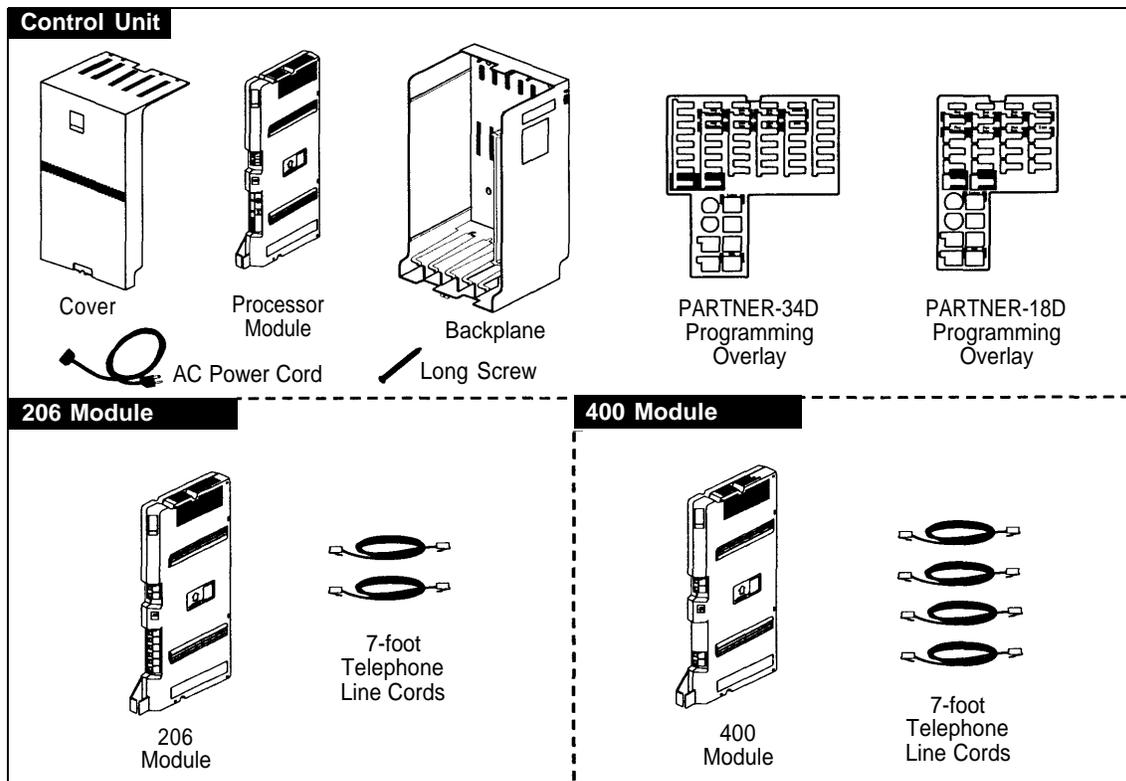

# EXTENSIONS

## Required Parts

You will have up to three types of system component packages; Figure 1 shows the contents of each package in the area marked by a dashed line. Check your packages to be sure you have the parts shown here (if not, call for support as instructed on the inside front cover of this guide).

**Figure 1. Required Parts**

You will need to obtain four #12 screws of the appropriate type for the wall and weight of the control unit (a control unit with four 206 modules and a processor module weighs approximately 27.5 pounds or 12.3 kilograms).

In addition, if you need modular telephone cords to connect the extension jacks on the control unit to the modular connecting blocks for extensions in the equipment room, short telephone cords or wall plates to wall mount PARTNER-model phones, or a 355A/355AF adapter and D8W telephone cord for connecting a call reporting device, order them before installation. Refer to "Product Ordering Information" in Appendix B of the *PARTNER Plus Communications System Programming and Use* guide for ordering instructions.

References in this guide to 206 modules include 206E and all 206 modules used with previous releases of the product. Similarly, references to 400 modules include 400E and all 400 modules used with previous releases of the product.

---

**NOTE:**

A system display phone is *required* for programming at extension 10 and/or 11. If you have any 34-button phones in the system, you must use a 34-button display phone to program since an 18-button phone cannot be used to program a 34-button phone. Also, if your system has both PARTNER-model and MLS-model phones, it is recommended that you use a PARTNER-model display phone at the programming extension.

## **Installation Guidelines**

---

### **Telephones and Devices**

---

You can connect the following telephones and devices to the system:

- **PARTNER-model, MLS-model, MDC 9000, and MDW 9000 System Phones.** System phones require at least two-pair wiring and are compatible with Lucent Technologies 4-pair SYSTIMAX® wiring.
- **Call Assistant Intercom Autodialers with Busy Indication (PARTNER-CA48 for PARTNER-model phones or MLS-CA24 for MLS-model phones).** You can connect an Intercom Autodialer to the system phone at extension 10 and 11. The Intercom Autodialer connects to the system phone using an adapter that is shipped with the autodialer.
- **Industry-Standard Devices.** Industry-standard devices (including standard phones) require one-pair mounting cords; Lucent Technologies D2R mounting cords are recommended.
  - **Standard Phones.** Connect standard touch-tone or rotary dial phones to the system for:
    - **Power Failure Operation.** During a power failure, system phones will not work because they require power to operate. However, if you connect standard phones to extensions 10, 16, 22, and 28, users can place and answer outside calls on lines 1, 3, 5, and 7, respectively. You can connect a standard phone either alone or combined with a system phone. For more information, see “Combination Extensions” on the next page.
    - **Hotlines.** A hotline extension should be connected to a standard phone, rather than a system telephone, but can ring any type of phone. An internal hotline phone can also be set up to ring the paging system, so announcements can be made over the loudspeaker. Do not connect a hotline phone to extension 10, 16, 22, or 28, to keep them available for power failure use.

**NOTE:**

For message waiting capability, you must connect standard phones with message waiting lights to Release 3.1 (R3.1) or later 206 modules, and equip the system with an R3.1 or later processor module. This message waiting capability does not apply to standard phones with *neon-type* message waiting lights.

- 
- **Auxiliary Equipment.** There are a variety of ways to set up fax machines, modems, and answering machines to work with the system. See Chapter 4 in the *PARTNER Plus Communications System Programming and Use* guide for advice on using this equipment. To connect a telephone and a standard device on the same extension, see “Combination Extensions” below.
  - **Doorphones.** You can connect up to two doorphones to the system. Do not connect doorphones to extension 10, 11, 16, 17, 22, 23, 28, or 29.
  - **Voice Messaging Systems.** The system supports either of the following voice messaging systems:
    - The **PARTNER MAIL VS® System.** This device, which physically resembles a 206 module, resides in the control unit.
    - The **PARTNER MAIL® System.** This device connects to the system through extension jacks. Do not connect PARTNER MAIL to extension 10, 16, 22, or 28 to keep them available for power failure use.
  - **Call Reporting Devices.** You can connect either a serial printer or a call accounting device, such as Lucent Technologies Call Accounting Terminal, to the SMDR jack on the processor module to record and/or analyze call activity.
  - **In-Range Out-of-Building Protectors.** Installing phones or other standard devices (such as a doorphone) in a location other than the building where the control unit is installed requires Lucent Technologies In-Range Out-of-Building (IROB) protectors, to prevent damage due to lightning. (IROBs must be installed by a qualified technician.)

## **Combination Extensions**

You can connect a standard device (such as a standard phone or an answering machine) on an extension by itself, or so that it shares an extension with another piece of equipment (either another standard device or a system phone). An extension with two devices connected to it is called a *combination extension*. (If you combine a standard phone and a system phone on one extension, you may want to turn off the standard phone’s ringer during normal use.)

You cannot install two system phones on the same extension, and the combined REN (Ringer Equivalence Number) of two devices on one extension cannot exceed 2.0. (The REN for a system phone is 0.0.)

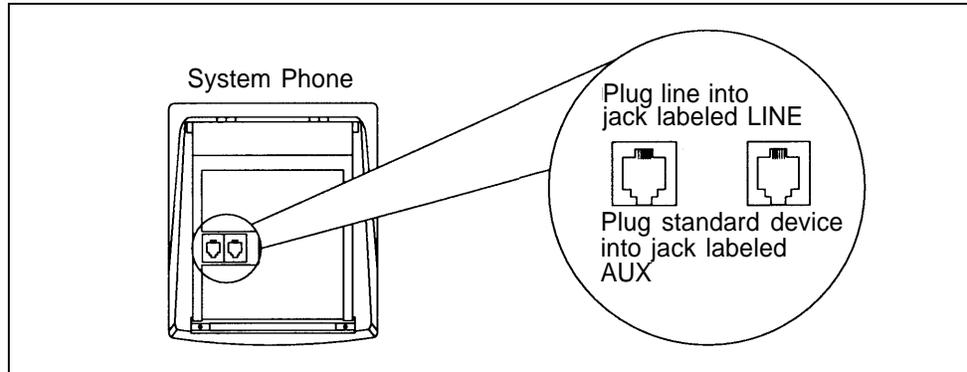

### **NOTE:**

The Call Assistant Intercom Autodialer is not regarded as a standard device. This means you *can* connect a standard device to a system phone that also has an Intercom Autodialer installed.

PARTNER-model system phones have a built-in auxiliary jack so you can connect a standard device directly to the phone without using a bridging adapter—see “Using A Direct Connection” on the next page. If your system phone does not have a built-in auxiliary jack or if you want to connect two standard devices together, you must use a Lucent Technologies 267F2 Bridging Adapter— see “Using a Bridging Adapter” on the next page.

## Using A Direct Connection

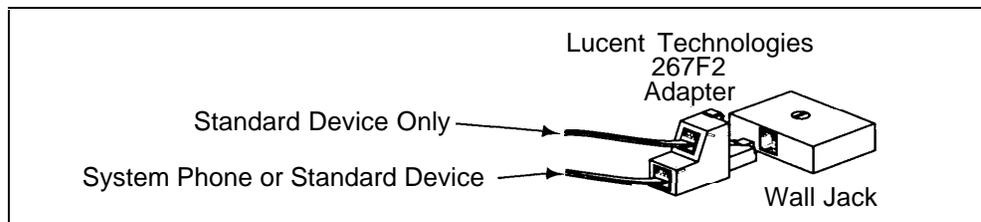

Figure 2 shows how to connect a standard device directly to a system phone, using the phone's built-in auxiliary jack. (Figure 2 is for illustration purposes only; the placement of the jacks on your phone may differ.)

**Figure 2. Combination Extension Using Direct Connection**

## Using a Bridging Adapter

Figure 3 shows how to connect a system phone and a standard device or two standard devices using a Lucent Technologies 267F2 Bridging Adapter.

**Figure 3. Combination Extension Using Bridging Adapter**

---

## Installation Procedures

---

Before installing the system, be sure you read the safety instructions on page ii.

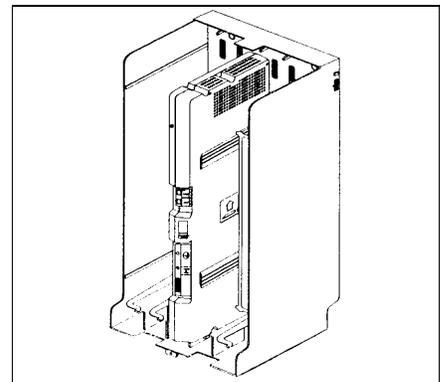

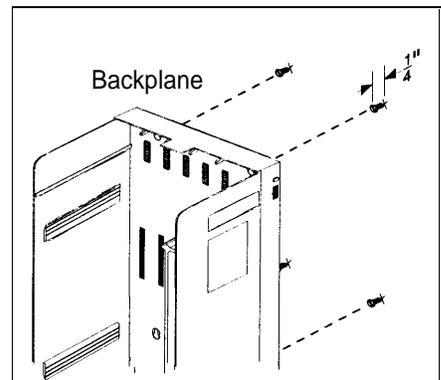

**WARNING:**

*There are no customer-serviceable components inside the system modules or backplane. There are hazardous voltages within that can cause severe or fatal personal injury. DO NOT OPEN THE MODULES.*

### Installing the Control Unit and Modules

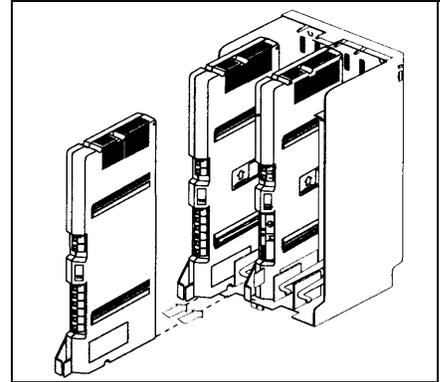

Install the control unit's backplane within five feet (1.5 meters) of a properly grounded electrical outlet (not controlled by a switch) and the network interface jacks. In addition, when you mount the backplane on the wall, leave at least six inches (15.2 cm) of clearance at the top and sides, and two feet (0.6 meters) at the front and bottom to ensure proper ventilation.

- 1**
  - A) Hold the backplane against the wall.
  - B) Using the four screw keyholes in the backplane as a template, mark screw locations on the wall.
  - C) Start four #12 screws, leaving the screw heads approximately 1/4" (.64 cm) away from the wall.
  - D) Slip the backplane onto the screws, then tighten them.
  
- 2**
  - A) Slide the processor module into the center slot of the control unit.
  - B) Push slowly but firmly in the center of the module until the module locks into place, and is attached to the rear of the backplane. Do not force the module. If it does not insert easily, remove the module, clear any obstruction, and reinsert it.
  
- 3** Before installing any modules, check to make sure the clear, plastic cover has been removed from the connector area on the rear of each module.

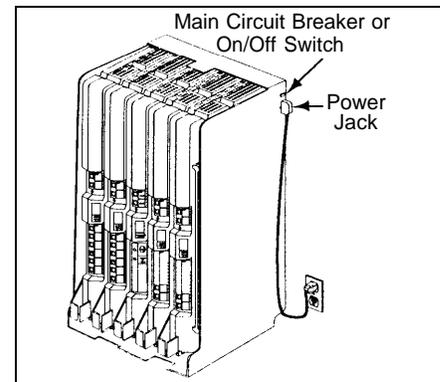

- 4**
- A) Slide the first 206 module into the *leftmost* slot of the backplane. (The system will not work if a 206 module is not installed in this slot.)
  - B) From left to right, install 206 modules, then any 400 (or 200) modules. The 400 modules *should always* be to the right of all 206 modules, so the extensions will be numbered consecutively.

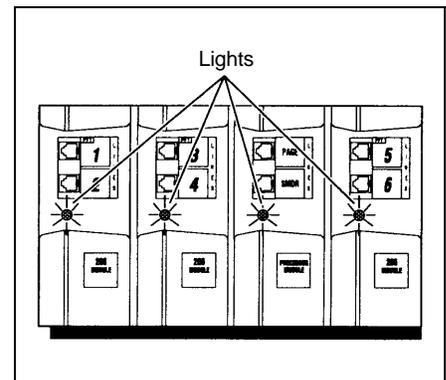

Do not force the modules. If a module does not insert easily, remove it, clear any obstruction, then reinsert it by pushing slowly, but firmly in the center of the module.

- 5**
- A) Pull out the main circuit breaker on the control unit or move the on/off switch to the "off" position ("O"), depending upon which hardware configuration you have.
  - B) Press the power cord firmly into the power jack on the top right side of the backplane until it locks into place.
  - C) Plug the other end of the power cord into a properly grounded three-prong wall outlet not controlled by a switch.
  - D) To power up the control unit, push in the main circuit breaker, or move the on/off switch to the "on" position ("I").

- 6** Check all green lights on the fronts of the modules. If all the lights are lit, you can go to the next section; otherwise:
- A) *If a single light is out*, power down the control unit, reseal the module, then power up the control unit.  
*If multiple lights are out*, power down the control unit, reseal the leftmost module that has a light out, then power up the control unit.
  - B) *If the lights are still out*, call for support as instructed on the inside front cover of this guide.

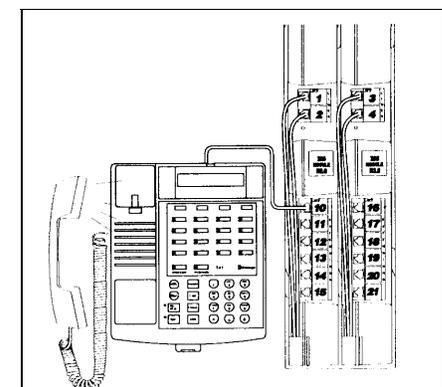

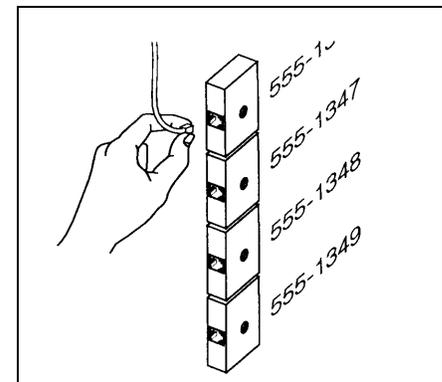

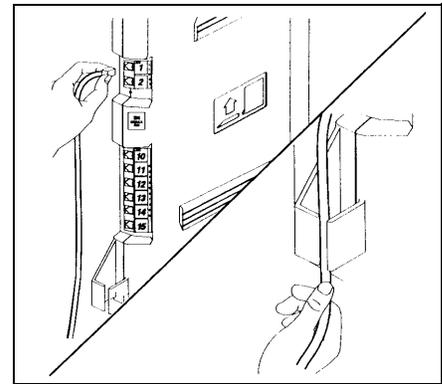

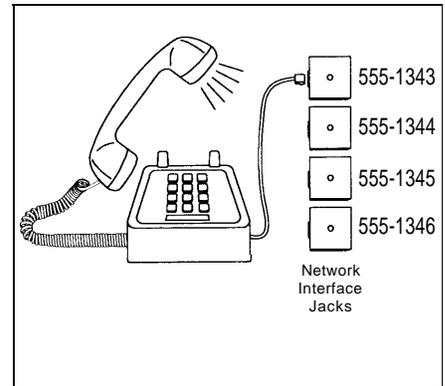

## Connecting Lines and Extensions

If extensions are not wired to any modular jacks, call a qualified service technician.

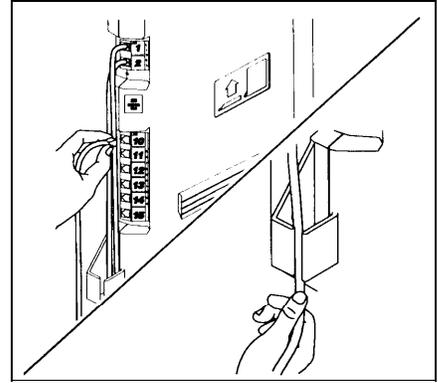

- 1**
  - A) Test for dial tone at the network interface jacks before connecting outside lines to the control unit. For the test, connect a standard phone to the first network interface jack.
  - B) Lift the handset and listen for dial tone. (If there is no dial tone, contact your local telephone company before continuing.)
  - C) Repeat for each network interface jack.
  
- 2**
  - A) Connect line cords to the line jacks on 206 and 400 modules, starting with the top line jack on the leftmost 206 module.
  - B) Route each cord through the hook on the front of the module.
  
- 3**

Connect the free end of each line cord to the appropriate network interface jack.
  
- 4**
  - A) Test the lines—plug a system phone into extension jack 10. Press the line buttons for each outside line and listen for dial tone.
  - B) Repeat for extensions 16, 22, and 28 (if available).

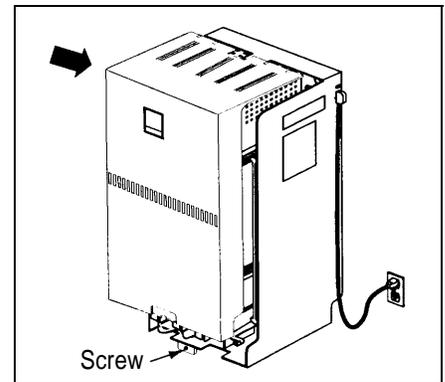

## 5

- A) Connect modular telephone cords to 206 module extension jacks, starting at the top extension jack on the leftmost module.
- B) Route each cord through the hook on the front of the module.
- C) Connect the free end of each modular telephone cord to the modular connecting blocks for system extensions.
- D) Dress the wires. Gather the line and extension cords hanging below the hooks of the first two modules and twist tie or wire wrap them. Repeat for the remaining cords. Place each bundle of wires in the indentations cut out of the bottom edge of the backplane.

## 6

- A) Before installing the cover, make sure all modules are seated properly. The cover will not fit if the modules are not seated properly.
- B) To cover the modules, grasp the upper edges of the cover and hold it squarely over the control unit. It is important to install the cover to keep the modules dust-free and the system working efficiently.
- C) Place the cover over the modules and make sure it fits firmly in place.
- D) Insert the screw into the tab on the lower front of the cover. Tighten the screw.

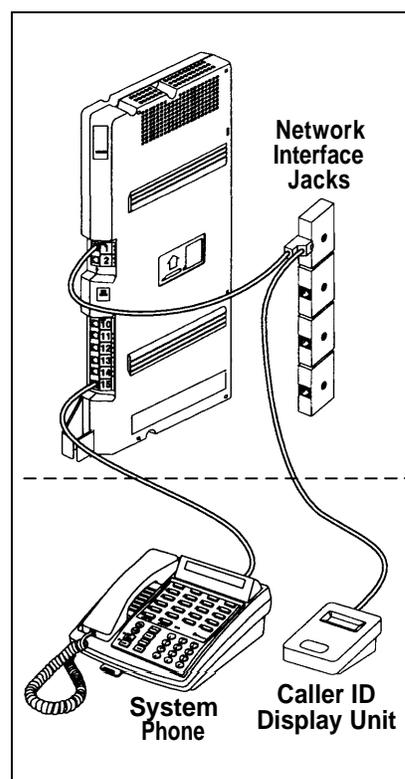

## Connecting Caller ID Display Units

To get Caller ID information for an extension, you must first subscribe to the service (on a per-line basis) from your local telephone company, then connect the units as described here. You must connect the Caller ID display unit directly to the line that supports Caller ID at the network interface jack. Additionally, you must provide a separate wiring run for the unit to the appropriate location. To have additional wiring runs installed, call a qualified technician.

### **NOTE:**

To have Caller ID for multiple lines at a single phone, you must provide a separate box and a separate wiring run for each line.

- 1** Insert a Lucent Technologies 267F2 Bridging Adapter into the network interface jack associated with the line that has Caller ID service.
- 2**
  - A) Plug one end of a line cord into a jack on the bridging adapter.
  - B) Plug the free end of the line cord into the appropriate line jack in the control unit.
  - C) Route the cord as you did for other line and extension cords.
- 3**
  - A) Plug one end of a second line cord into the other jack on the bridging adapter.
  - B) Plug the free end of the cord into the appropriate modular connecting block in the equipment room.
  - C) Plug the Caller ID display unit into the additional modular jack—provided by the separate wiring run—at the appropriate location.
  - D) Place the Caller ID display unit next to the phone.
  - E) Make sure the Caller ID line is assigned to the extension where the Caller ID display unit is located. Refer to “Line Assignment (#301)” in Chapter 5 of the *PARTNER Plus Communications System Programming and Use* guide for programming instructions.

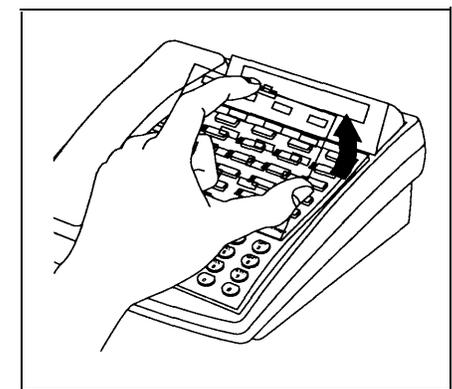

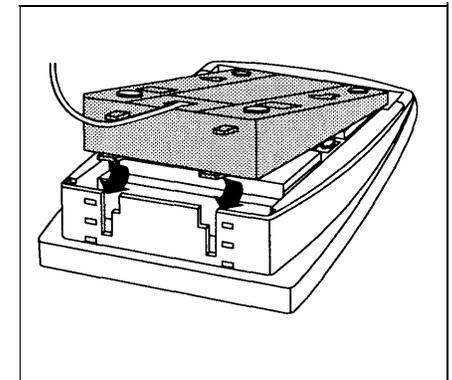

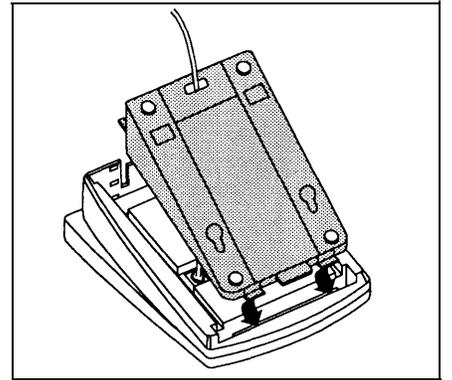

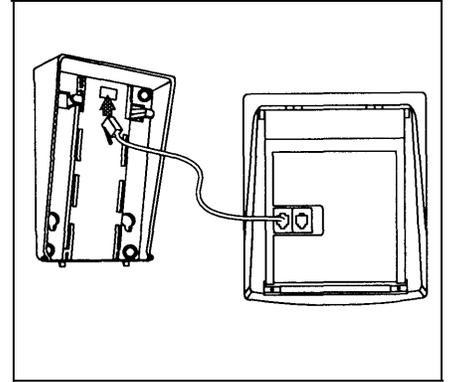

## Assembling System Phones

All PARTNER-model system phones are shipped with a stand for either desk mounting or wall mounting the phone.

### Desk Mounting

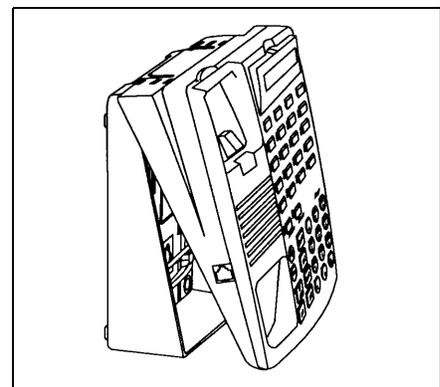

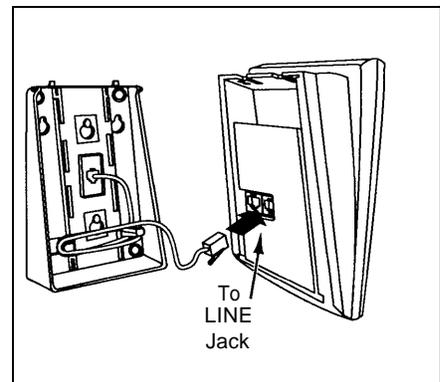

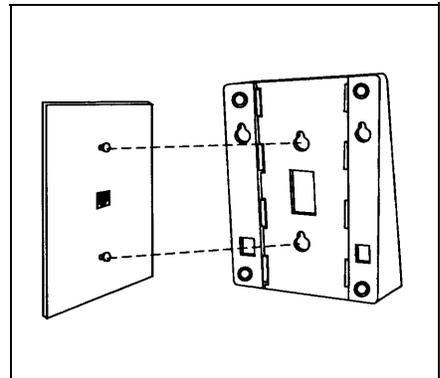

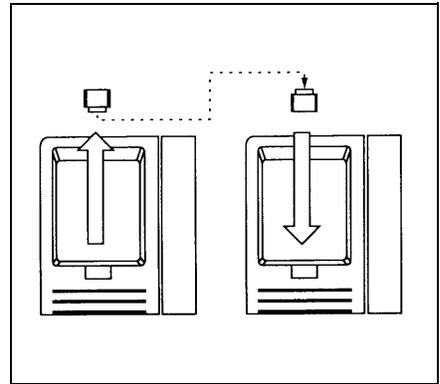

- 1**
  - A) Gently place the phone upside down.
  - B) Route the telephone cord through the hole in the top center of the stand.
  
- 2** Insert the tabs on the narrow end of the stand into the slots on the inside bottom edge of the phone.
  
- 3**
  - A) While pressing in the tabs that protrude from the wide end of the stand, lower the stand to the phone.
  - B) Release the tabs to lock the stand into one of the three positions provided by the openings in the back of the phone.
  - C) The height of the stand is adjustable to three positions: low, medium, and high. The phone height can be adjusted by moving the locking tabs to a different position.
  
- 4**
  - A) Turn the phone over.
  - B) Remove the plastic cover from the phone. Label the button sheet to show any programmed lines or button features, then place the button sheet on the phone so the holes fit over the buttons. Carefully replace the plastic cover.
  - C) Adjust the swivel display to the desired angle (low, medium, or high).
  - D) To access the *User Instruction Cards*, pull out the tray located under the front of the phone.

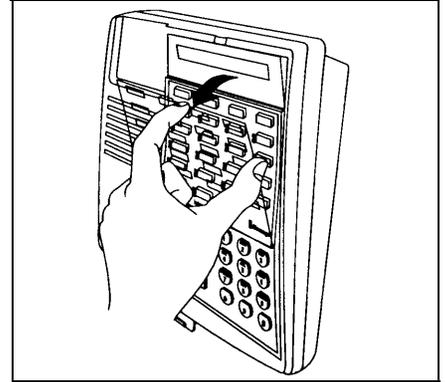

## Wall Mounting

Wall mounting instructions apply only to PARTNER-model phones. To wall mount an MDC 9000 cordless phone, follow the instructions in the booklet provided with the phone.

- 1**
  - A) Reverse the plastic hook that sits in the earpiece part of the handset cradle.
  - B) Turn the phone upside down and remove the tray that holds the *User Instruction* cards: press the tabs on both sides of the tray near the pull out tab while you slide the tray straight out.
  
- 2** Holding the stand with the wide edge down, mount the stand on the wall plate using the keyholes on the base of the stand. For proper mounting, the wall plate must be a Lucent Technologies 630B connecting block.
  
- 3**
  - A) Plug one end of the telephone cord into the jack in the center of the wall plate.
  - B) Plug the other end of the telephone cord into the LINE jack on the bottom of the telephone.
  - C) Wrap any excess cord around the cord wrap posts on the bottom inside of the stand.
  
- 4**
  - A) To mount the phone on the stand, insert the tabs on the top of the stand into the first set of notches on the top edge of the phone.
  - B) Make sure the telephone cord is neatly wrapped inside the phone, then rotate the phone down until the bottom edge snaps into position.

- 5**
- A) Remove the plastic cover from the phone. Label the button sheet to show any programmed lines or button features, then place the button sheet on the phone so the holes fit over the buttons. Carefully replace the plastic cover.
  - B) Make sure the swivel display is set to the lowest position.

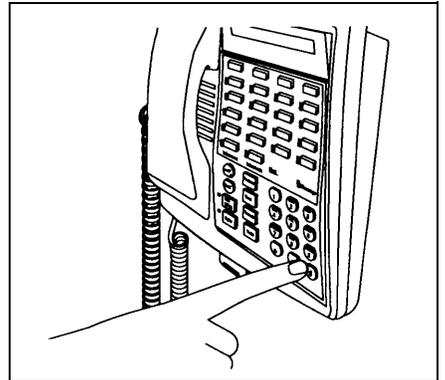

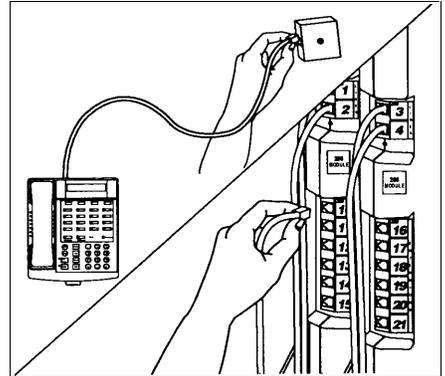

### Connecting and Testing Telephones

- 1**
- To connect a phone, plug the modular telephone mounting cord into a modular wall jack or directly into a 206 module extension jack. (If you are connecting a standard phone and its mounting cord is loose, try a Lucent Technologies D2R mounting cord instead.)

To install two phones (or other devices) on a single extension jack, see "Combination Extensions" earlier in this guide.

- 2**
- A) Test the telephone for proper operation. To test the power and lights on a system phone: while the phone is idle, press and hold the [#] button for five seconds.
  - B) Before releasing the [#] button, lift the handset. All lights should light, the ringer should sound, and (on system display phones only) a test pattern should appear on the display. (If not, call for support as instructed on the inside front cover of this guide.)
  - C) Replace the handset; the phone is now in normal operating mode.

---

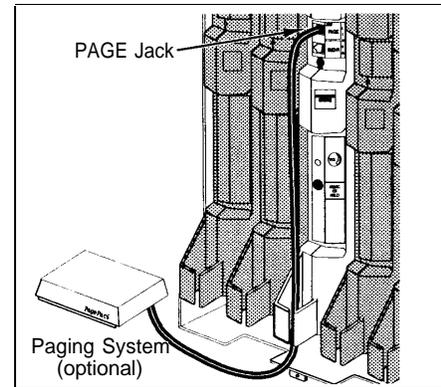

## Connecting Paging, Call Reporting (SMDR), and Music-On-Hold Devices

Only steps for connection to the processor module are provided here. See the manufacturer's instructions for more information on installing and using these devices.

### Paging System

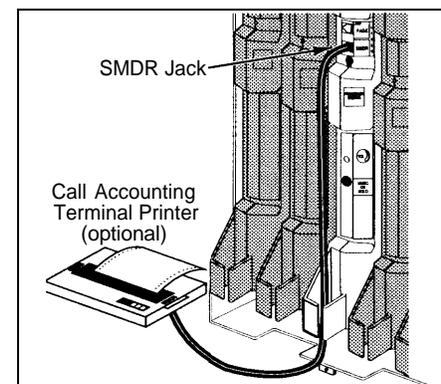

If you connect a paging system from a manufacturer other than Lucent Technologies, a paging interface may be required.

- 1 Insert the modular plug into the PAGE jack on the processor module.
- 2 Route the cord as you did for line and extension cords, then connect it to the paging system.

### Call Reporting (SMDR) Printer

- 1 Insert one end of a D8W modular cord into the SMDR jack on the processor module.
- 2 Plug the other end into a 355A adapter, then plug the adapter into the printer's RS-232C serial port.

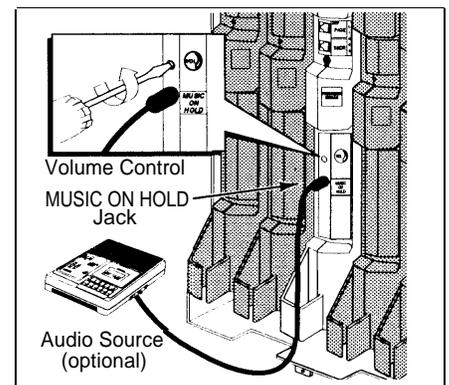

---

## Music-on-Hold Audio Source

If you use equipment to broadcast certain copyrighted music or material, including songs or other material from radio broadcasts, you may be required to obtain the permission of the copyright owner. One way to obtain permission is to contact ASCAP, BMI, and/or similar performing rights organizations, to obtain a license. Lucent Technologies disclaims any liability arising out of the failure to obtain such a license, if required.

For alternative (usually pre-licensed) sources of music to use with this feature, you may wish to contact Telephonetics International, Inc. at 1 800 446-5366. Or, you can purchase a Magic on Hold system from Lucent Technologies, which does not require you to obtain a license.

- 1** First set the unit's volume to the lowest setting. Use a flathead screwdriver to turn the volume control on the processor module counterclockwise until it stops.
- 2** Insert an RCA phono plug into the MUSIC ON HOLD jack on the processor module.
- 3** Route the cord as you did for line and extension cords, then connect it to the audio source.
- 4** Place a call on hold and listen while adjusting the volume, clockwise. If you do not hear music at any setting, check "Music On Hold (#602)" in Chapter 5 of the *PARTNER Plus Communications System Programming and Use* guide.

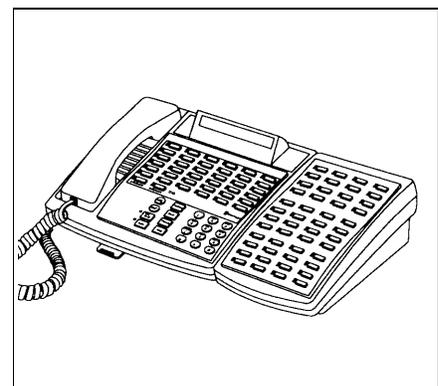

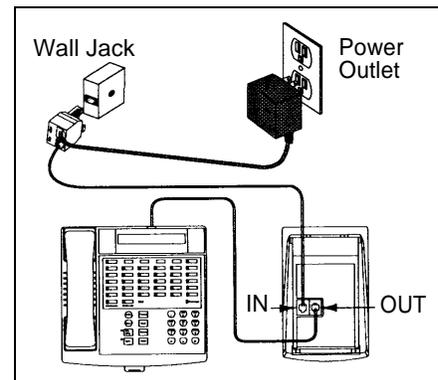

## Connecting a PARTNER-CA48 Intercom Autodialer

The PARTNER-CA48 Intercom Autodialer is shipped with an adapter, a D8W line cord, a power cord, a power unit, and a button labeling sheet.

### NOTE:

The PARTNER-CA48 Intercom Autodialer can be wall mounted to work next to a wall-mounted system phone.

- 1 Plug the adapter into the wall jack.
- 2
  - A) Plug one end of the D8W line cord into the J1 jack on the adapter.
  - B) Plug the other end of the D8W line cord into the IN jack on the bottom of the autodialer.
- 3
  - A) Plug the blue-tinted connector (labeled D8AC) of the power cord into the jack on the power unit.  
**⚠ CAUTION:**  
*Use only the power unit supplied with the PARTNER-CA48 Intercom Autodialer.*
  - B) Plug the other end (clear tinted) of the power cord into the J2 jack on the adapter.
  - C) Plug the power unit into an electrical outlet.
- 4 Plug the phone's modular telephone cord into the OUT jack on the bottom of the autodialer.
- 5
  - A) Arrange the autodialer on the desk next to the phone.
  - B) Remove the plastic cover from the autodialer and label the button sheet with employee names. Place the button sheet on the autodialer, then carefully replace the plastic cover.
  - C) Adjust the height of the autodialer to match the system phone.

### IMPORTANT:

If you unplug the system phone that is connected to an autodialer, you must reset the autodialer. To do so, unplug the D8W line cord (connected to the IN jack on the bottom of the autodialer) from the J1 jack on the adapter, then plug it back in.

# Equipment Upgrades

## Adding New Modules

### WARNING:

Before starting, disconnect the power cord from the power jack on the backplane.

**1**

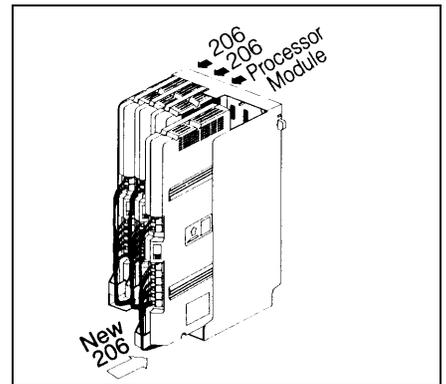

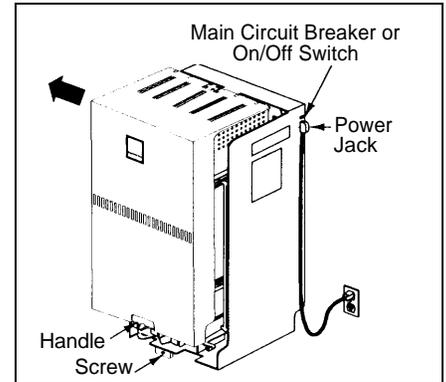

- A) Pull out the main circuit breaker or move the on/off switch to the “off” position (“O”), depending upon which hardware configuration you have.
- B) To remove the cover, loosen the screw on the lower front of the cover. Then place one hand on the handle on the bottom front of the cover and place your other hand on the top of the cover.
- C) Gently pull the cover up and away from the backplane—be careful not to break the tabs that attach the cover to the backplane.

**2**

- A) Before you insert the new module, make sure that all 400 (or 200) modules are installed to the right of all 206 modules.
- B) Push slowly but firmly in the center of the module until the module locks into place, and is attached to the rear of the backplane. Do not force the module. If the module does not insert easily, remove it, clear any obstruction, and reinsert it.

**3**

- A) See “Connecting Lines and Extensions” for instructions on connecting line and/or extension jack cords to the new module.
- B) Reconnect the power cord.
- C) To power up the control unit, push in the main circuit breaker, or move the on/off switch to the “on” position (“I”).

**4** Check all green lights on the fronts of the modules. If all the lights are lit, installation is complete; otherwise:

A) *If a single light is out*, power down the control unit, reseal the module, then power up the control unit.

*If multiple lights are out*, power down the control unit, reseal the leftmost module that has a light out, then power up the control unit.

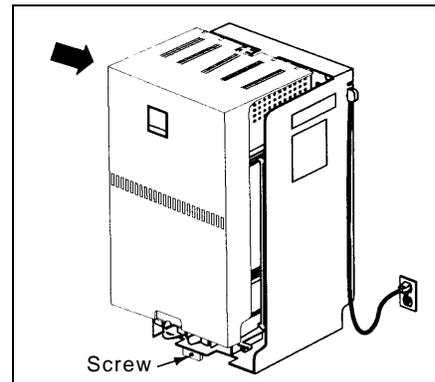

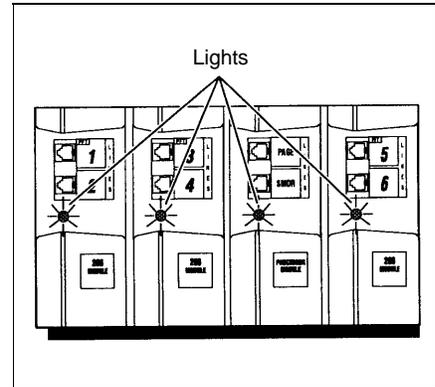

B) *If the lights are still out*, call for support as instructed on the inside front cover of this guide.

**5** A) Before replacing the cover, make sure all modules are seated properly. The cover will not fit if the modules are not seated properly.

B) To replace the cover, grasp it by its upper edges and hold it squarely over the control unit.

C) Place the cover over the modules and make sure it fits firmly in place.

D) Tighten the screw on the lower front of the cover.

## Replacing System Modules

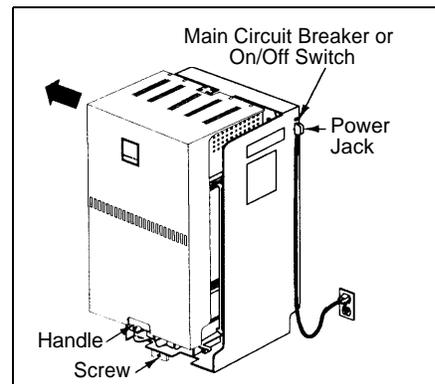

### **⚠ WARNING:**

*Before starting, disconnect the power cord from the power jack on the backplane.*

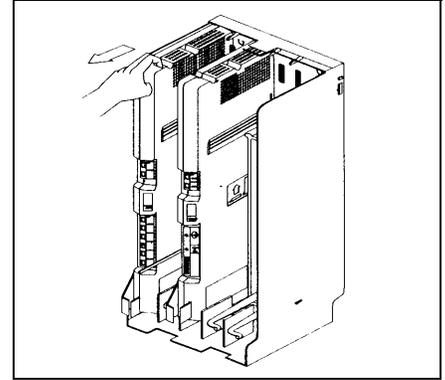

**1** A) To power down the control unit, pull out the main circuit breaker or move the on/off switch to the “off” position (“O”), depending upon which hardware configuration you have.

B) To remove the cover, loosen the screw on the lower front of the cover. Then place one hand on the handle on the bottom front of the cover and place your other hand on the top of the cover.

C) Gently pull the cover up and away from the backplane—be careful not to break the tabs that attach the cover to the backplane.

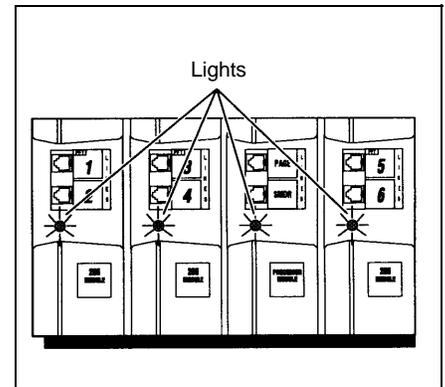

- 2
  - A) Check the slack in the wires. If there is not enough slack to remove the module without pulling the line and extension cords free, label and disconnect the wires before continuing with Step 2B.
  - B) Place one hand on top of the module. With your other hand, grip the plastic bracket on the bottom front of the module, and pull out the old module.
  - C) To insert the replacement, push slowly but firmly in the center of the module until the module locks into place, and is attached to the rear of the backplane. Do not force the module. If the module does not insert easily, remove it, clear any obstruction, and reinsert it.

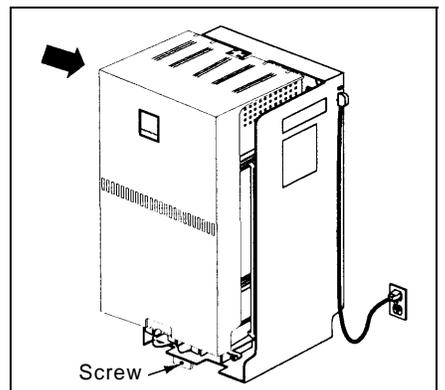

- 3
  - A) Connect the line and extension cords one at a time, making sure to place the correct cords into their corresponding jacks on the new module.
  - B) Reconnect the power cord.
  - C) To power up the control unit, push in the main circuit breaker, or move the on/off switch to the "on" position ("I").

- 4 Check all green lights on the fronts of the modules. If all the lights are lit, installation is complete; otherwise:

- A) *If a single light is out*, power down the control unit, reseal the module, then power up the control unit.  
*If multiple lights are out*, power down the control unit, reseal the leftmost module that has a light out, then power up the control unit.
- B) *If the lights are still out*, call for support as instructed on the inside front cover of this guide.

- 5
  - A) Before replacing the cover, make sure all modules are seated properly. The cover will not fit if the modules are not seated properly.
  - B) To replace the cover, grasp it by its upper edges and hold it squarely over the control unit.
  - C) Place the cover over the modules and make sure it fits firmly in place.
  - D) Tighten the screw on the lower front of the cover.

## Specifications

Capacities	System	206 Module	400 Module	Extension Jack
	<ul style="list-style-type: none"> <li>▪ 12 outside lines via line jacks on two 206 plus two 400 modules</li> <li>▪ 24 extensions via extension jacks on four 206 modules</li> <li>▪ 1 loudspeaker paging system via PAGE jack on processor module</li> <li>▪ 1 audio source via MUSIC ON HOLD jack on processor module (RCA phono plug required)</li> <li>▪ 1 call reporting device via SMDR jack on processor module (355A/F adapter required)</li> <li>▪ 2 doorphones, using 2 extension jacks</li> <li>▪ 1 voice messaging system—PARTNER MAIL VS, which occupies a slot in the control unit or PARTNER MAIL, which connects to either 3 or 5 extension jacks.</li> </ul>	<ul style="list-style-type: none"> <li>▪ 2 outside lines</li> <li>▪ 6 extensions</li> </ul>	4 outside lines	<ul style="list-style-type: none"> <li>▪ Maximum 2 devices per extension jack, total REN on jack not to exceed 2.0* (System phone REN is 0.0 (zero))</li> <li>▪ No more than one system phone per jack</li> </ul> <p><i>For programming, a system display phone must be connected to extension 10 or 11.</i></p>
