

Dialogic® JCT Media Boards

Dialogic® JCT Media Boards can be used by developers to provide cost-effective, scalable, high-density communications applications. The applications include those requiring digital network interfaces as well as multimedia resources, such as voice and software-based speech recognition or fax in a single Personal Computer (PC) slot. These boards offer a rich set of advanced features and support Digital Signal Processor (DSP) technology, Continuous Speech Processing (CSP), and industry-standard PCI or PCI Express bus, and CT Bus technologies.

Products Discussed in This Datasheet

- Dialogic® D/480JCT-1T1 Media Board
- Dialogic® D/480JCT-2T1 Media Board
- Dialogic® D/600JCT-1E1 Media Board
- Dialogic® D/600JCT-2E1 Media Board

CSP technology — the DSP-based solution optimized for speech recognition — enables a friendly user interface and seamless integration of speech recognition software from leading speech technology vendors. CSP reduces system latency, increases recognition accuracy, and improves overall system response time for high-density speech solutions.

Onboard DSP-based fax and support for software-based speech recognition lets developers maximize the number of boards in the system for multimedia communications applications, such as web-enabled call centers, voice portals, unified messaging, or speech-enabled Interactive Voice Response (IVR). The option to use voice coders, such as Global System for Mobile Communications (GSM) and G.726, provides the capability to build unified messaging solutions while extending existing legacy messaging systems. In addition, Dialogic® Global Call Software facilitates global deployment to meet the growing needs of your business.

Features	Benefits
48 to 60 independent voice channels, and 24 to 48 T1 or 30 to 60 E1 network channels in a single PCI or PCI Express slot	Lower costs while creating larger high-density systems with fewer boards per chassis
Supports G.726 bit exact and GSM coders	Enables implementation of unified messaging applications that meet VPIM standards
Silence-compressed recording	Eliminates silence and preserves hard disk space
Unified call control access through Dialogic® Global Call Software interface	Provides worldwide application portability and shortens development time by using the same API for almost any network protocol
Separate models available with Universal PCI or PCI Express edge connector	Universal PCI form factor compatible with 3.3 V and 5.0 V bus signals enabling deployment in a wide variety of PCI chassis from popular manufacturers; PCI Express form factor compatible with 1x slot (x1 or higher compatible) also available
Supports DSP-based onboard fax and host-based speech recognition on select boards (fax and host-based speech recognition are mutually exclusive)	Maximizes the number of boards in the system
